THE HCD 10 BUILDING EXECUTIVE

DAVE KIEVET

ILPD, ASHE, CEA, LCI, division president, national healthcare market leader, The Boldt Company (Appleton, Wis.)

WHO HE IS: Kievet has more than 32 years of experience in construction and has played a leading role in expanding Boldt's healthcare footprint across the U.S. while also focusing over the last two decades on developing and implementing Integrated Lean Project Delivery® (ILPD). In his role as division president, he's responsible for establishing and expanding Boldt's operations in California, Oklahoma, Michigan, and adjoining markets. Colleagues say his executive abilities and field experience have positioned him to handle all aspects of a construction project and earned him a reputation as

a detail-oriented manager and executive. In addition to his professional accomplishments, Kievet teaches ILPD at the University of Wisconsin-Madison School of Civil and Environmental Engineering.

YEAR IN REVIEW: As project executive, Kievet oversaw the opening of the 366,000-square-foot Kay Jewelers Pavilion at Akron Children's Hospital

(Akron, Ohio), which included a 100-bed NICU and outpatient surgery center; the new 210,000-square-foot Five Hills Health Region hospital (Moose Jaw, Saskatchewan, Canada), which houses 72 inpatient rooms, 43 universal care rooms, and four operating rooms; and a multiphase project for Sutter Medical Center Sacramento (Sacramento, Calif.), involving a new 395,000-square-foot women's and children's center. "Dave makes it safe for his teams to try new and innovative ideas and provides encouragement, resources, and support," says colleague Michelle Bailey. "He has a strong belief that the knowledge and skill required to deliver a remarkable project does not reside with the designer, engineer, or contractor independently but rather as an aggregate, with each doing their part but remaining in balance."

WHAT'S NEXT: Kievet says he'll continue to work closely with healthcare project delivery teams across the country to drive innovation and change the way healthcare projects are delivered. Specific projects in the works include a 216,000-square-foot, 120-bed replacement hospital at the St. Luke's campus in San Francisco, as well as a new hospital and medical office building for Sutter Health's Van Ness and Geary campus (San Francisco).
